Introduction

What is Movie Recommendation?

A website that helps users discover films based on their preferred language and movie genre.

5 Languages

Telugu • Hindi • Tamil
Kannada • Malayalam

Genre Discovery

Action • Romance • Comedy
Thriller • Feel-Good and more

Recommendations

Matching movies ranked by rating

Abstract

A simple DSA solution to movie discovery

Movie Recommendation is a Python Flask website that allows users to explore films in five languages. Each movie has one main genre, a poster and basic details.

Python Lists and Dictionaries store the movie records. Linear Search finds matching movies, while Bubble Sort arranges recommendations by rating.

The website makes movie selection easier and demonstrates how DSA concepts solve a real-world problem.

Problem Statement and Objectives

Problem

Many movies across different languages and genres make it difficult to find suitable choices quickly.

Objectives

- Store movie data in Lists and Dictionaries
- Filter by language and genre
- Search for matching movies
- Rank recommendations using Bubble Sort

Hardware and Software Requirements

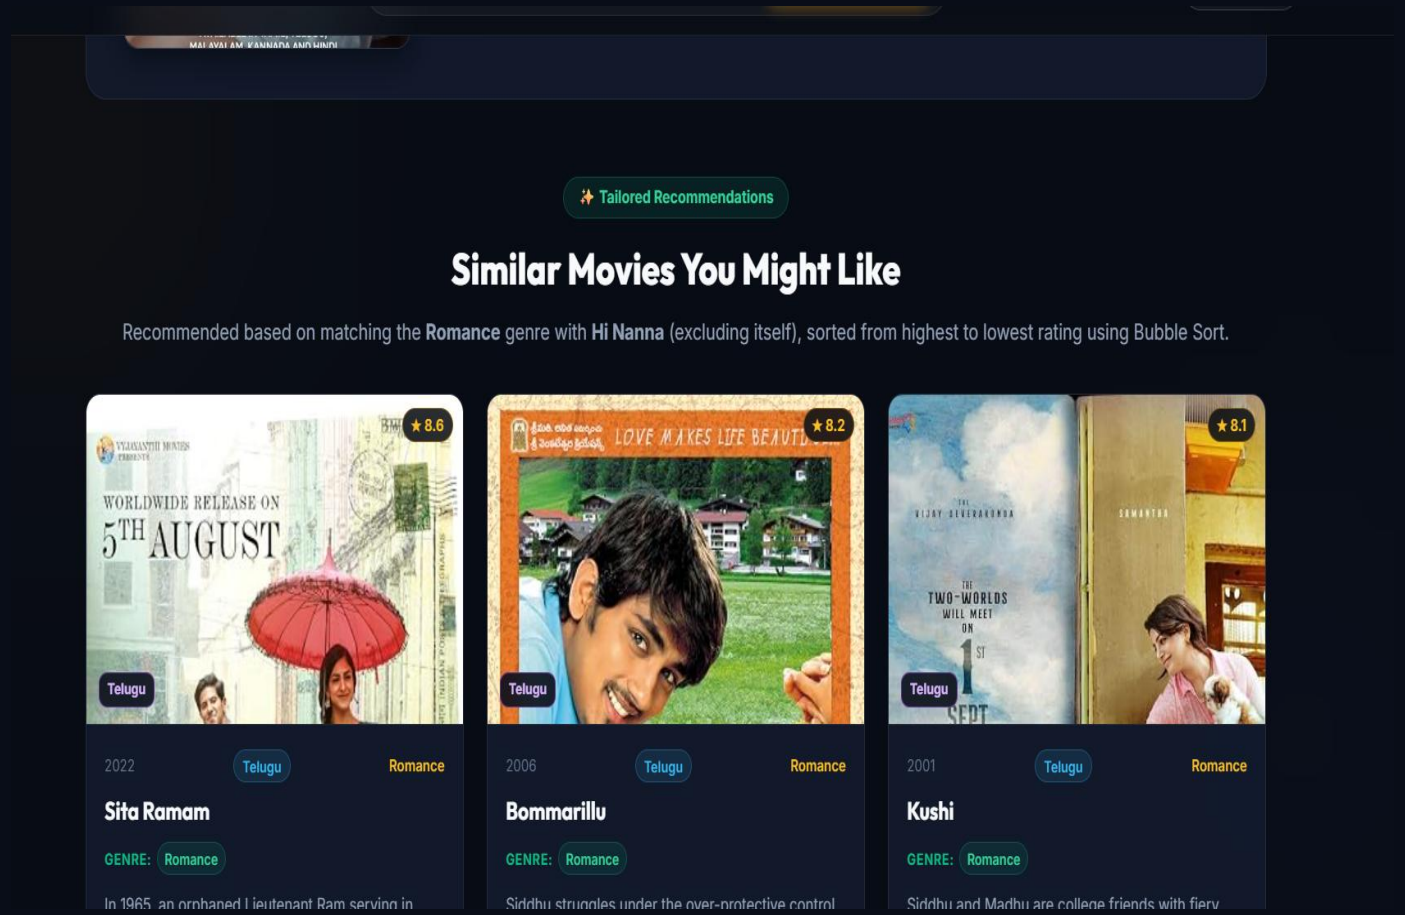

Hardware

- Laptop or desktop
- 4 GB RAM or above
- Keyboard and mouse
- Internet for initial setup

Software

- Python 3 + Flask
- HTML, CSS and JavaScript
- Visual Studio Code
- Web browser
- Lists, Dictionaries, Linear Search, Bubble Sort

Results — Website Output

What the website shows

1. Select language and genre
2. Browse matching movie posters
3. Open a movie
4. See similar recommendations sorted by rating

Project Workflow

01

Choose Language

02

Choose Genre

03

Browse Movies

04

Linear Search

05

Bubble Sort

06

Show Recommendations

Literature Survey — DSA Approach

Lists and Dictionaries

Store multiple movie records and their details such as title, language, genre and rating.

Linear Search

Check each movie one by one to find matching language and genre values.

Bubble Sort

Compare nearby movie ratings and order the matching movies from highest to lowest.

Conclusion

Movie Recommendation helps users find films they may enjoy without browsing every available movie.

Core Concept

Linear Search finds matching movies.
Bubble Sort ranks the results.

Project Outcome

A practical multilingual website that demonstrates Data Structures and Algorithms.

Future Scope

01 Add more movies and regional languages

02 Improve rating accuracy and movie metadata

03 Introduce favorites and user profiles

04 Offer smarter recommendations in a future version

05 Improve poster coverage and accessibility
